

HOW PIVAH WORKS

A practical, step-by-step guide — minting, the Marketplace, the DEX, and staking.

Four things you can do on Pivah, in the order most people use them: mint an NFT, list or buy on the Marketplace, trade instantly on the DEX, and stake for rewards. This is a hands-on guide, not a technical spec — for that, see the Whitepaper.

1. Mint an NFT — create something to trade

- 1. Go to Mint NFTs** — Choose Single NFT for one unique piece, or Collection for many items sharing one contract.
- 2. Add your artwork** — Upload one shared image for every token, or upload layered traits and let Pivah generate unique combinations with rarity weights.
- 3. Fill in the details** — Name, symbol, description, supply, and — for collections — how many to mint right away.
- 4. Create & deploy** — One click deploys your contract. Large mints (over 80 tokens) happen in a few small batches automatically, so no single transaction gets too big to confirm.

Once minted, a single NFT can be listed on the Marketplace. A collection can also be deposited into a DEX pool to trade instantly, like a token.

2. Marketplace — list at a price, or buy at one

- 1. To list: pick your NFT(s) and a price** — One shared price for a batch, or a different price per token if some are rarer than others.
- 2. Your NFT moves into escrow** — From the moment it's listed, the NFT is held safely by the Marketplace contract — it can't be staked or pooled elsewhere at the same time, and you can cancel anytime to get it straight back.
- 3. To buy: pick a listing and confirm** — If you're paying with plain ETH, Pivah wraps just enough of it into WETH automatically first — you don't need to think about that step.
- 4. Sale proceeds** — If you're the seller, payment lands in your wallet as WETH the moment your item sells. Convert it to ETH anytime from your Portfolio page.

3. Pivah DEX — trade instantly, no waiting for a buyer

- 1. Find or create a pool** — Each collection can have one or more liquidity pools. If none exists yet, the first liquidity provider sets it up — the starting price is derived automatically from their deposit, never typed in by hand.
- 2. Buy or sell against the pool** — No matching buyer needed — trade directly against the pool's inventory. Price moves a little with every trade, the same way a token's price does on any DEX.
- 3. Add liquidity (optional)** — Deposit NFTs and WETH together to earn a share of every trade's fee. Withdraw your share anytime.

4. Staking — stake NFTs, earn PIVAH

- 1. Stake any NFT** — From any collection — not just ones minted on Pivah. No lock-up: unstake anytime.
- 2. Earn continuously** — Every staked NFT earns an equal share of PIVAH rewards, accruing in real time for as long as it's staked.
- 3. Claim your rewards** — Claim your accumulated PIVAH whenever you like, directly from the Stake page.
